Subject: Turbidity Curtain

Mike,

You asked about management of the turbidity boom post-dredge. Much of what is currently in the river is beyond repair and thus will be added to the scow today for disposal. It will be co-mingled with stabilized sediment and transported to the Lone Mountain landfill of Clean Harbors. However curtain that is undamaged will be retained so that it can be deployed as a barrier during the placement of the cap.

Let me know if you have any other questions.
